PHONE NEEDS MUST BE ADVANCED WITH PRODUCTION

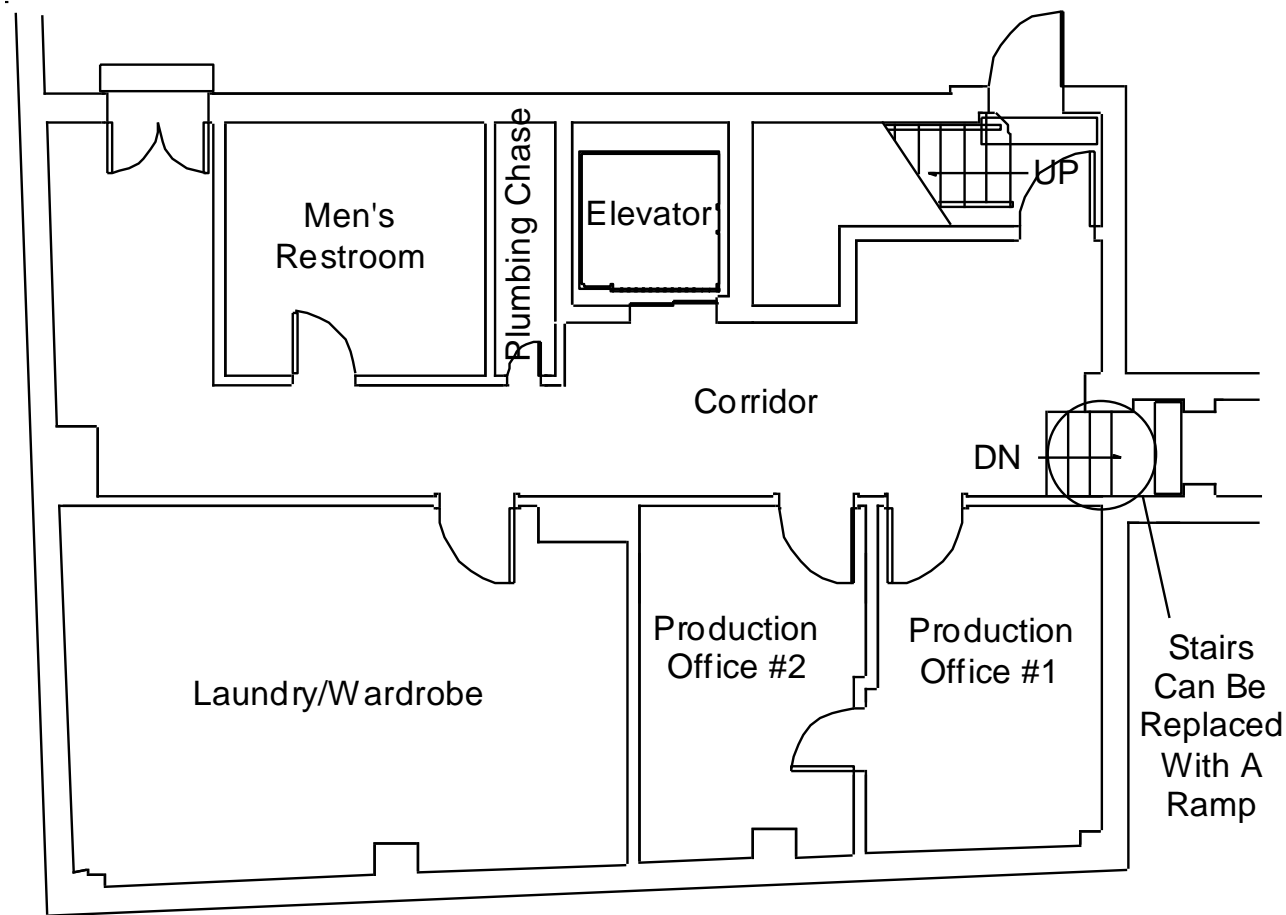

The Fox Theatre backstage wireless and hardline internet system has a circuit of 150Mbps download and 20Mbps upload. This circuit is neither behind a firewall nor any managed device. It is an open circuit provided for anyone working backstage (crew, artist, management, and others). It is a circuit separate from the rest of the building and building needs. We do not have a way to separate and dedicate any portion of this backstage bandwidth to just one-party operating backstage.
